

AuthentiCheck — AI Learning Authenticity Evaluator

Introduction

AuthentiCheck is an AI-powered academic integrity evaluation system developed to help teachers verify whether students genuinely understand their submitted assignments, reports, essays, or code. The system uses adaptive viva-style questioning and scoring mechanisms to evaluate student understanding and authenticity.

The project provides an interactive dashboard, evaluation workflow, session history tracking, and performance analytics in a modern responsive web interface.

Team Details

Team 30

Name	Roll Number
Hadi Mohammad	22017020023
Muskan Fatima	22017020024
Rohma Aden	22017020040

Program

BSCS — Bachelor of Science in Computer Science

Core Features

1. Landing Page

- Professional modern UI
- Project introduction
- Feature showcase
- Workflow explanation
- Call-to-action sections

2. Login & Role Selection

Users can access the system as:

- Teacher
- Student
- Guest User

Features:

- Role-based access
- User information handling
- Guest demo mode

3. AI-Based Evaluation System

Submission Handling

Teachers can:

- Upload assignment files
- Paste assignment text
- Add student details
- Select viva difficulty level

Supported File Types

- PDF
- DOCX
- TXT
- HTML
- JavaScript
- Python
- Java
- C++

- Markdown files

4. Adaptive Viva Questioning

The system analyzes the student submission and generates dynamic viva questions based on:

- Assignment content
- Concepts detected
- Difficulty level

Difficulty Levels

- Easy
- Medium
- Hard

5. Result Evaluation

The system evaluates:

- Depth of Understanding
- Accuracy
- Confidence

Final Verdict Types

- Authentic
- Partial Understanding
- Suspicious

6. Dashboard Analytics

The teacher dashboard provides:

- Total evaluations
- Average scores

- Authenticity distribution
- Suspicious submissions
- Recent activity tracking

7. Session History

Stores previous evaluations including:

- Student details
- Scores
- Verdicts
- Feedback summaries

Working of the System

Step 1 — User Login

The user selects a role and enters required information.

Step 2 — Submission Input

Teacher uploads or pastes student work.

Step 3 — AI Analysis

The system analyzes the content and detects important topics.

Step 4 — Viva Generation

Adaptive viva questions are generated automatically.

Step 5 — Evaluation

Student answers are evaluated by the system.

Step 6 — Final Report

The system generates:

- Authenticity score
- Detailed feedback

- Final verdict

Technologies Used

Technology	Purpose
------------	---------

HTML5	Structure
-------	-----------

CSS3	Styling & Responsive Design
------	-----------------------------

JavaScript	Application Logic
------------	-------------------

LocalStorage	Session Data Storage
--------------	----------------------

Google Fonts	Typography
--------------	------------

Tabler Icons	Icons & UI Components
--------------	-----------------------

Conclusion

AuthentiCheck is a smart educational evaluation platform designed to help educators assess genuine student understanding using AI-powered adaptive viva techniques. The system combines modern UI/UX design with intelligent evaluation workflows to improve academic integrity assessment.
